Issues
themed

Planning the changes - Themes

Planning the changes

- The themes (IT Systems and Clinic flow) were then looked into using a variety of tools such as process mapping to determine how we could improve things.
- Gave teaching sessions – helped engage the team

- This generated objectives of things we wanted to see
- Aims converted into tangible ideas

Planning the changes

Global aims

- “Decrease amount of clinic slots cancelled by the department every month by 20% by reviewing the way in which staff take leave”
- “Help provide support for a business case to upgrade clinical IT systems”
- “Improve workflow and efficiency in the clinical workshop by reviewing the repairs process and work environment”

Making the changes

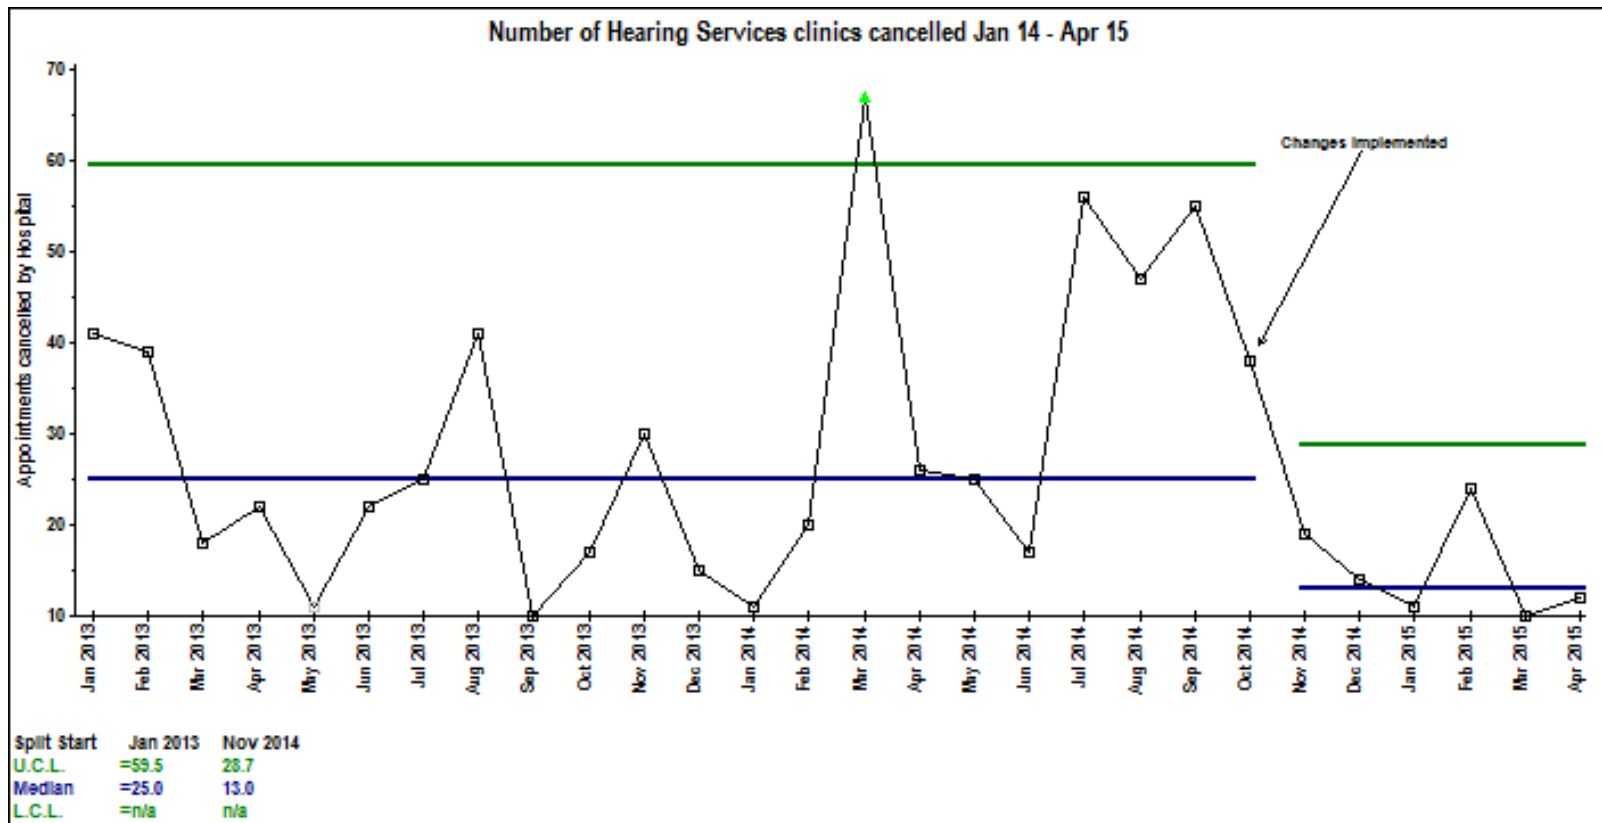

Principles

- Tried to ensure we understood baseline data before we made changes
- Trialled changes and tweaked as necessary – tests of change

Benefits of changes made - IT

- Implementing new IT system will save time for clinic and admin staff and improve safety

Making the changes

Benefits of changes made – 41% decrease in cancellations

Culture / other benefits

- Helped foster a culture of improvement in the department.
- Not just about the changes we have made so far – about embedding learning and culture.
- Ran sessions on specific tools, e.g. process mapping / visual management

Review

- Positive changes made
 - Personal development
 - Culture / Teaching sessions
-
- What was hard?
 - Starting out as a coach whilst simultaneously learning theory
 - Being disciplined
 - Taking on too much
 - Didn't have patient involvement

Team views

“Helps give us dedicated time to focus on change”

“Makes us be more objective over our own issues”

Helps the whole team see the picture of how we work

5Ps poster

Video review from project lead

Moving forward

- New project launched by department
- Coach involvement decreasing
